PLATFORM SUMMARY SHEET

JOBSITE QUALITY MANAGEMENT SOFTWARE FOR THE FLOORING INDUSTRY

A cloud-based, software platform (SaaS) utilizing mobile devices (phones, tablets & IoT environmental sensors) and a proprietary database of manufacturer's product specifications to easily monitor, communicate and archive essential data to improve installation outcomes.

CLiMIT™ provides real-time, jobsite data insights which lead to fast issue identification and resolution.

Maintains secure, organized records of key project information for future retrieval.

KEY BENEFITS

- Enhances & standardizes onsite quality assurance with installation personnel.
- Provides exceptional jobsite climate conditions visibility and alerts synchronized to a database of manufacturer product specifications.
- Simplifies record keeping (climate data, alerts, communications, photos, notes, documents, batch and lot numbers).
- Installation & safety reminders at point of use.

CLiMIT™ MOBILE + DESKTOP

Ultimate climate visibility
Instantly view & record detailed climate conditions across all of your projects before, during and after installation.

Avoid expensive re-work
Receive real-time alerts and notifications based on actual project data detected by sensors when compared to product manufacturer's specifications.

Organize & store information
Capture & store important jobsite information (photos, notes, batch codes and documents) in your secure, CLiMIT™ database for future use.

Keep everyone informed
Easily share content via email or text message, and maintain a permanent record of it, with any contact in your phone.

CLiMIT™ DATABASE

Retrieve product specifications
Instantly access essential specification data from thousands of flooring installation products. Ambient temperature, humidity, dew point, sub-floor RH%, and pH are all available.

Receive manufacturer installation recommendations and updates
View manufacturer-verified specifications and the most helpful installation and safety tips for onsite personnel.

Store information securely
The CLiMIT™ database is a highly secure and organized digital vault built with the most advanced AWS encryption technology used by US Government agencies and many of the world's largest companies.

NO WiFi REQUIRED

JOBSITE CONDITIONS SENSORS

Out-of-the-box connectivity synced directly to the CLiMIT™ database
Sensors automatically connect to national, cellular networks and the secure CLiMIT™ database. Scan each sensor's QR code with the mobile app and go. No WiFi, password, or connectivity hassles.

Versatile instrumentation
Capture ambient temperature, humidity, and dew point readings with reliable precision sensors engineered for the most demanding, commercial-grade conditions.

Simple to power
Sensors are powered by either re-chargeable, long life, Lithium-Ion batteries or plugged into any 110v power source, whether it be a wall outlet or back up battery.

Reliably record data
Capture vital climate data in the most challenging data transmission conditions. Sensors store data automatically if network connectivity is unavailable. Upon re-connecting to the network, data is transmitted to the secure CLiMIT™ database.

Durable
Commercial-grade, IP67 rated durability. Protected against the intrusion of water, dust and debris. Superior impact and vibration resistant electronic components and plastic housing.

Easy mounting
Simple mounting to walls or fixtures with the sensor mount or magnets, double-sided tape, 3M® Command Strips, construction tape, or cable ties.
